                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Similarity
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           (bases 1 to 458)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                primer: M13 primer
/note="Vector: lambda pSB; Site_1: BamHI; Site_2: EcoRI; /note="Vector: lambda pSB; Site_1" BamHI; Site_2: EcoRI; First strand cDNA was primed with an anchored Xhol-oligo(dT) primer [5'GGAGGACTCGAGCGGCGCAGGAGGAG(T)VN 3'; V=A,C,G: N=A,C,G; T] and then dG tailed. Second strand was primed with a BamH1-dC primer [5'AGAGAGCTCGGATCCGCGCGCAATRAATRAAT(C) 3']. Double-stranded cDNA was then digested with BamH1 and Xhol and directionally cloned into the BamH1 and SalI sites of lambda pSB vector. Library went through one round of normalization. Library was constructed by Wei Yu at RIKEN of Japan (Carninci P, Westover A, Nishiyama Y, Ohsumi T, Itoh M, Nagaoka S, SasakiN, Okazaki Y, Muramatsu M, Schneider C, Hayashizaki Y, High efficiency selection of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Conservative
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                94

/note="Vector: pBluescript SK-; Site_1: EcoRI; Site_2:
XhoI; cDNA was synthesized from poly mRNA using an
oligo-dT primer containing an XhoI site. Following second
strand synthesis, EcoRI adapters were ligated to the cDNA
and products were size-selected on sephacryl S500. The
cDNAs were ligated to EcoRI/ XhoI prepared lambda ZapII
(Stratagene). Clones were converted to phagemids by mass
excision using ExAssist helper phage and E.coli SOLR cells
(Stratagene). Insert sizes range from 0.3-3.0 kb. The
library may contain a small percentage of host or
bacterial contaminents. NOTE: Many clones lack the 5'
EcoRI site but contain the upstream polylinker sites."

                                                                                                                                                                                                                                                                                                                                      /note="Vector: lambda pSB; Site_1: BamHI; Site_2: EcoRI; First strand cDNA was primed with an anchored XhoI-oligo(dT) primer [5'GGAGGACTCGAGCGGCGCAGGAGGAG(T)VN 3'; V-A,C,G; M-A,C,G,T] and then dC tailed. Second strand was primed with a BamH1-dC primer [5'AGAGAGCTCGGATCGCGGCGCAATAATAATAAT(C) 3'].

Double-stranded cDNA was then digested with BamH1 and XhoI and directionally cloned into the BamH1 and SalI sites of lambda pSB vector. Library went through one round of normalization. Library was constructed by Wei Yu at RIKEN of Japan (Carninci P, Westover A, Nishiyama Y, Ohsumi T, Itoh M, Nagaoka S, SasakiN, Okazaki Y, Muramatsu M, Schneider C, Hayashizaki Y, High efficiency selection of full-length cDNA by improved biotinylated cap trapper., DNA Res 4: 1, 61-6, Feb 28, 1997)*

The specification also describes a cell calcification inhibiting agent containing c-erg protein (AAY01521). The proteins are used for measuring the calcification of cell, for diagnosing arthritis deformans or ossification of spinal (Cell, for diagnosing arthritis deformans or ossification of spinal (Cell, for diagnosing arthritis deformans or ossification of spinal (Cell, for diagnosing arthritis deformans or ossification of spinal (Cell, for diagnosing arthritis deformans or ossification of spinal (Cell, for diagnosing arthritis deformans or ossification of spinal (Cell, for diagnosing arthritis deformans or ossification of spinal (Cell, for diagnosing arthritis deformans or ossification of spinal (Cell, for diagnosing arthritis deformans or ossification of spinal (Cell, for diagnosing arthritis deformans or ossification of spinal (Cell, for diagnosing arthritis deformans or ossification of spinal (Cell, for diagnosing arthritis deformans)
